Dear Mr. Held,

Your Mining and Reclamation for the Diamond Creek Phosphate Mine (Plan) located in Utah County, Utah, was received in this office on June 10, 2016. Appendix C of the Plan is a memorandum from Norwest Professional Geologist, Larry Henschel recommending "that any exploration at Diamond Creek include some preliminary tests for selenium." The Bureau of Land Management (BLM) concurs with this recommendation.

In order to provide adequate baseline data for proper characterization and handling of mined and processed rock, the BLM requests that you provide an initial screening plan to test for selenium. In general the BLM would recommend that you collect at least two surface samples each from both the overburden waste rock (above the ore zone) and under burden waste rock (unit stratigraphically below the ore zone). In addition we recommend two samples from the ore zone. Please be aware that the BLM may require additional sampling and an update to the sampling plan as exploration and mining progress.

If you have any questions, or require additional information, please contact Stephen Allen of my staff at (801) 977-4360.

Sincerely,

Matthew Preston
Field Office Manager
